Ideas  
shape  
the future.

Innovation  
from the start.

Dynamics create  
the lead.

We are a medium-sized, independent, owner-managed family business. ninka is one of the leading injection moulding specialists for thermoplastic polymers and uses a variety of both downstream and integrated surface refinement processes.

For over 60 years we have always looked for ideas to help us find innovative ways of designing new products and solutions. Our commitment and focus on quality have helped us create a successful future with our employees and customers.

# Planned systems create trust.

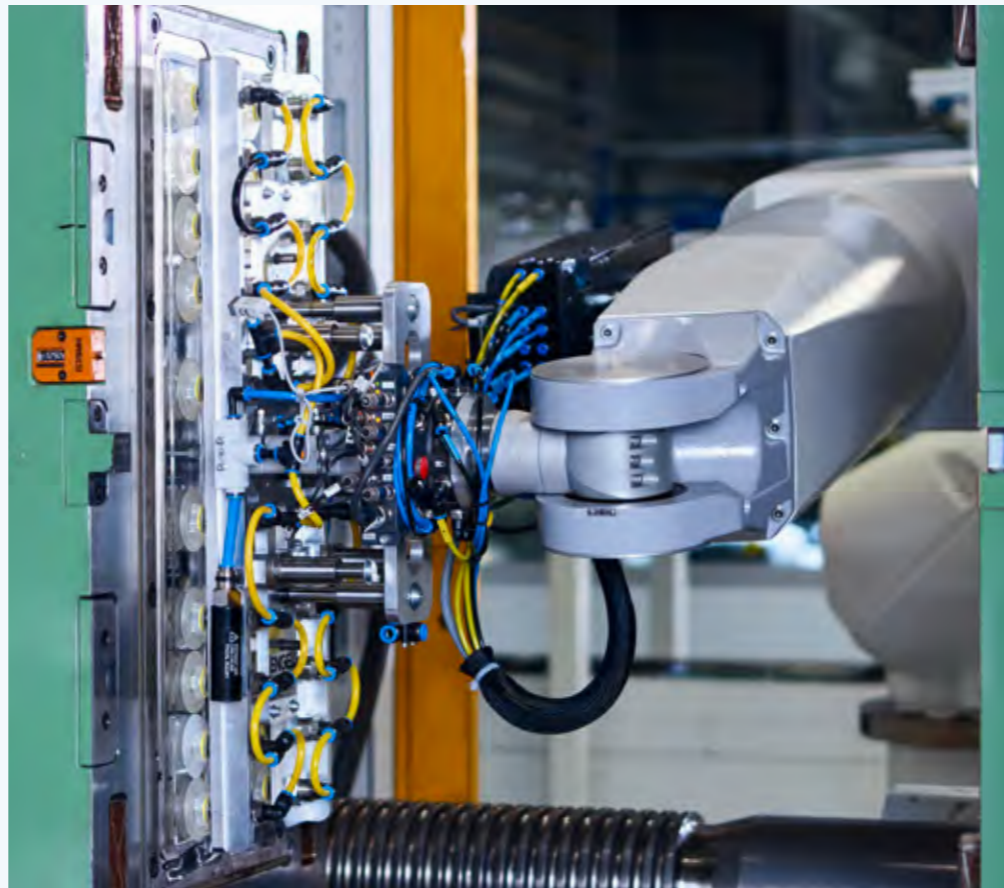

The path to success is the introduction and maintenance of a management system aimed at continuous performance improvement. Leading and steering an organisation includes, among other management disciplines, the focus on quality management.

All annual audits to obtain and maintain certificates according to DIN EN ISO 9001 (Quality Management), DIN EN ISO 14001 (Environmental Management) and DIN EN ISO 50001 (Energy Management) were successfully passed.

# Quality that convinces.

ninka aligns their quality standard with a zero fault policy and the industry-specific requirements of our customers. Our Manufacturing Execution System (MES) and the CAQ Inspection System from incoming goods to the finished products are the cornerstones of our quality assurance.

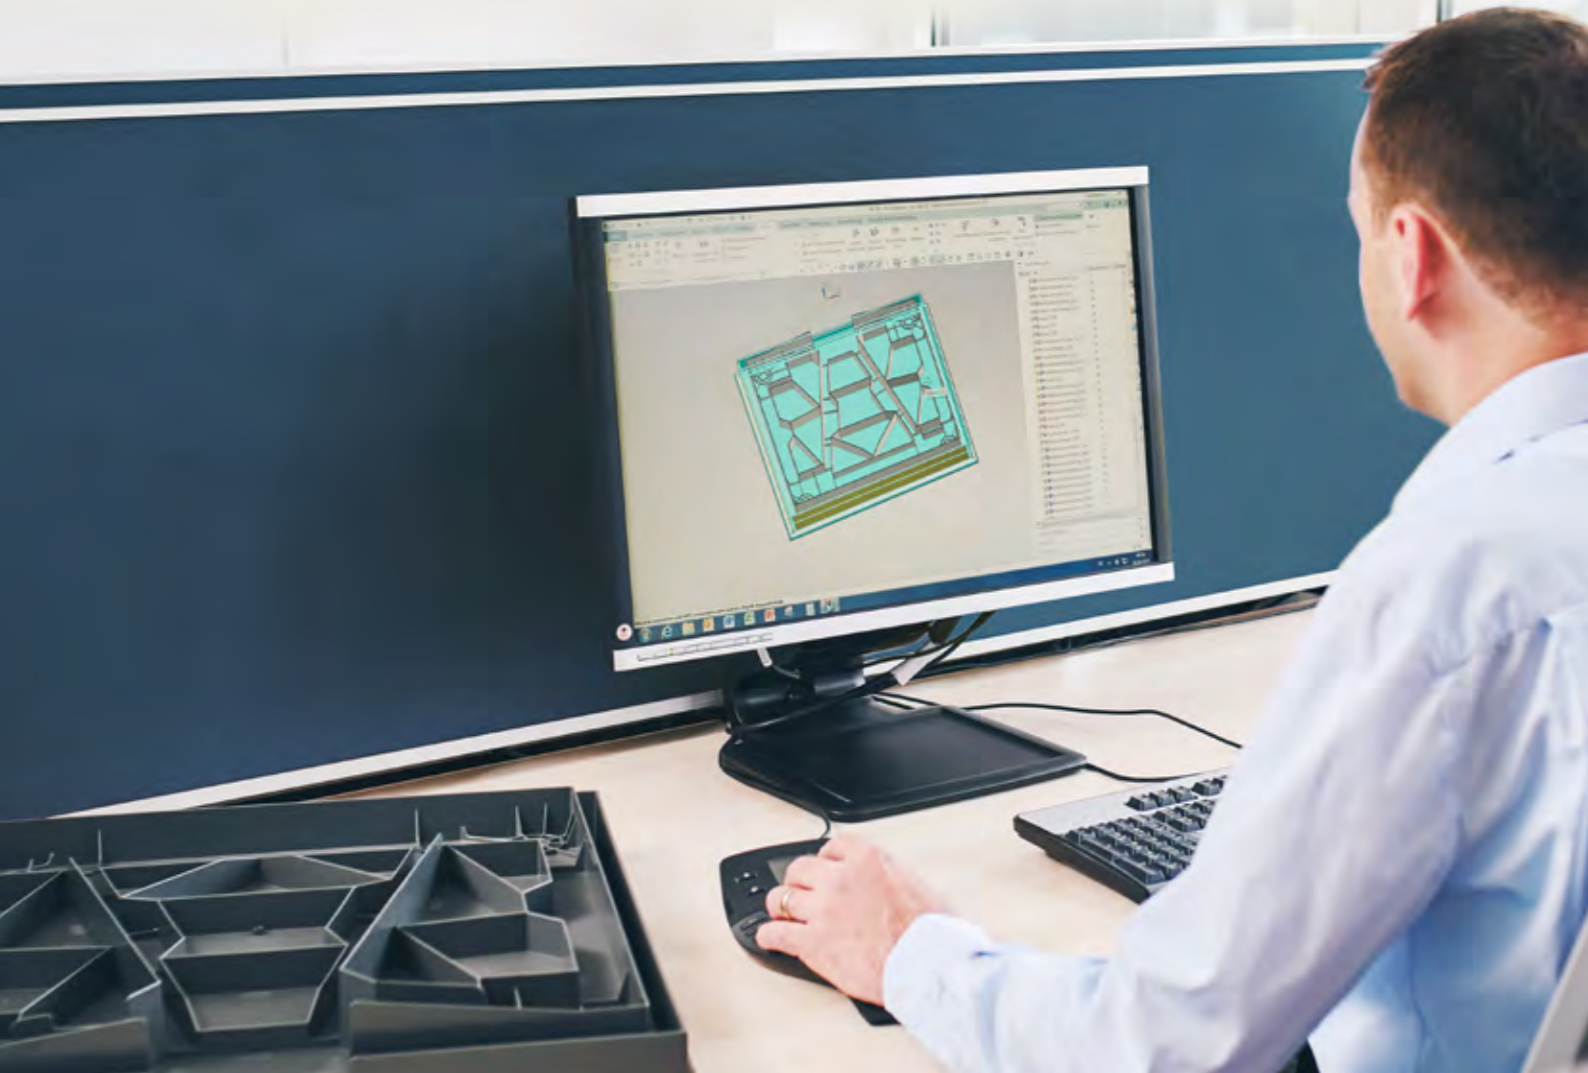

# Mastered complexity.

The commitment to polymers as a raw material and the use of state-of-the-art technologies with more than 60 years of experience in injection moulding and surface refinement are what sets ninka apart.

# From an idea to a product.

Not only for the ninka product range, but also for our OEM customers in the industry, we develop ideas and create concepts. Our CAD System supports parts design engineering as well as in-house FEM calculations, injection moulding simulations and warpage calculations.

To assess component properties during the design engineering phase, both self-built prototypes and rapid prototyping or 3D printing parts are built. ninka consults its customers in regard to product design, material selection, process-relevant product design and the selection of suitable manufacturing methods.

# Successful project management.

All product realisation projects have a predetermined project structure following milestones as part of the project plan.

ninka project management is responsible for the global procurement of injection moulds from the best tooling manufacturers specialized in each specific mould type.

# Everything from a single source.

At ninka, it is important to us to have the right goods at the right place at the right time in close coordination with our sales and procurement partners.

Our logistics therefore include comprehensive planning, control, coordination, execution and inspection of the internal and external flow of information and material.

We take care of everything from order, material procurement through to production planning.

# Organising needs a system.

Our wide range of diverse products includes drawer organisation systems, interior drawer-fronts for all major drawer systems and sizes, and the perfect kitchen recycling system for modern kitchens. The ninka range is completed with exceptional solutions for kitchen corner storage.

# Industry supplier.

Customers from numerous industries value their longtime, trusting cooperation with ninka. In partnership with our customers we develop, design and produce both simple parts and complex systems for:

- Banking
- Lighting Technology
- Office Furniture
- Household Appliances
- Health Care
- Coffee Machines
- Retail Systems
- Solar Technology and Electronics

We look forward to receiving your requirements.

ninka procurement.

A close, trusting cooperation with our suppliers is essential for the success and the quality of our products. To stay up-to-date with a compelling proposition covering methodology, materials and services, we are always on the lookout for capable suppliers.

Dedicated  
and motivated –  
a dynamic team.

To guarantee our sophisticated range of services for our customers also in future, we need the cooperation and dedication of qualified and motivated employees. Creativity, strong team dynamics and open communication are very important to us.

The company stands for equal opportunities and respectful treatment of the dignity and personality of each individual. Honesty, reliability, fairness and openness are the basis for a trusting cooperation.
